Name: Nirai pandiyan

Algorithm for finding the second largest number (Method-1):

Step 1: Start
Step 2: Declare variables max1=0, max2=0,n,k and i.
Step 3: Declare an array arr with size n.
Step 4: Read variable n.
Step 5: Repeat from k=0 to n.
       Read arr[k]
Step 6: Repeat from i=0 to n.
        If arr[i] > max1
           max1 = arr[i]
Step 7: Repeat from j=0 to n.
        If arr[j] < max1 and arr[j] > max2
           max2 = arr[j]
Step 8: print max2.
Step 9: Stop.

Algorithm for finding the second largest number (Method-2):

Step 1: Start.
Step 2: Declare variable n and i.
Step 3: Declare a array value_list.
Step 4: Read variable n.
Step 5: Repeat i=0 to n.
       Read value and append it to value_list.
Step 6: Sort the value_list in descending order.
Step 7: Print the value_list[1].
Step 8: Stop.
